

## Our Unique Location Rocks, Rolls, and Gyrate

The Great Red Spot is a great anti-cyclonic (high pressure) storm akin to a hurricane on Earth, but it is enormous (three Earths would fit within its boundaries) and it has persisted for at least the 400 years that humans have observed it through telescopes. Since it is anti-cyclonic in Jupiter's Southern hemisphere, the rotation is counterclockwise, with a period of about 6 days. (A hurricane in Earth's Southern hemisphere rotates clockwise because it is a low pressure system.) The clouds associated with the Spot appear to be about 8 km above neighboring cloud tops.

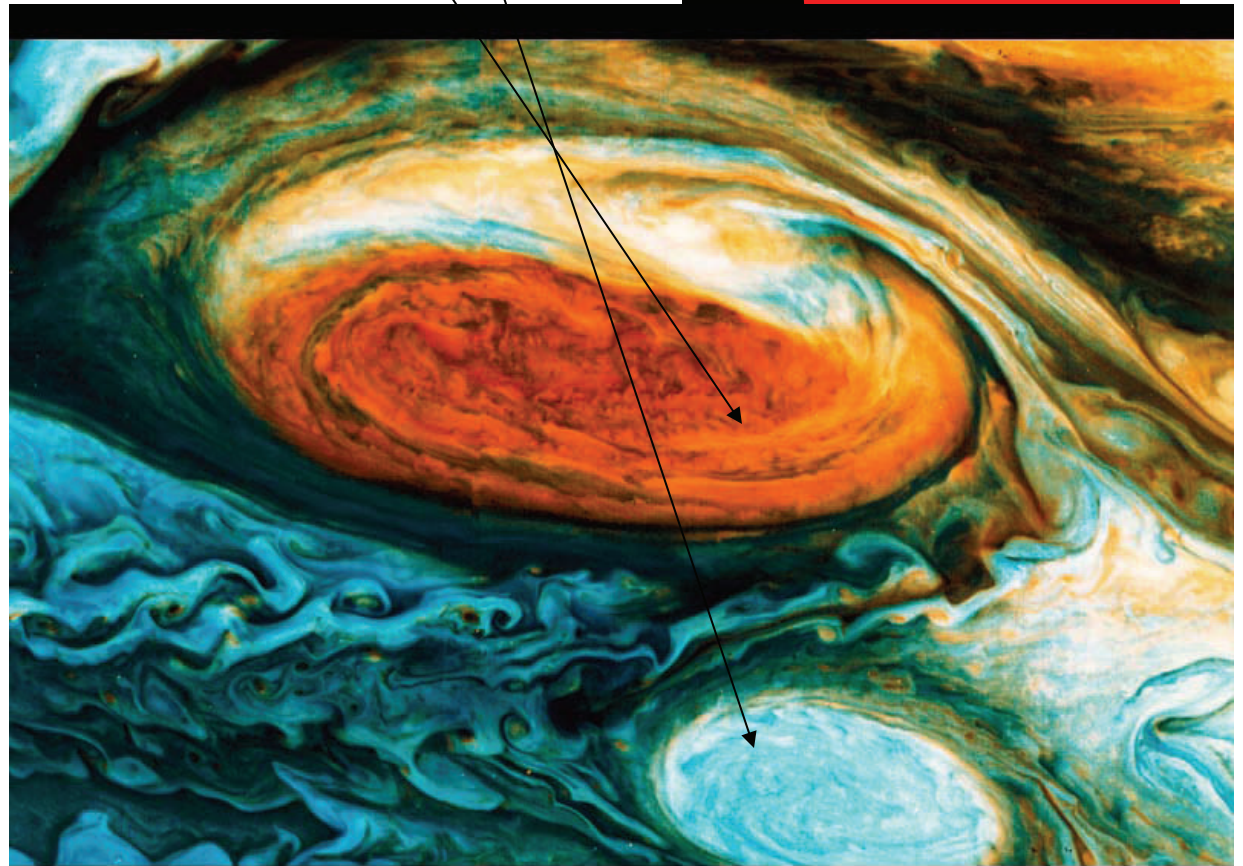

It's the most gaseous, stormiest place in the Solar System, bar none.

The closest restaurants are here (except for the topless bar run for the locals)

the Spaceport**

## More on Jupiter Tourist Draws-

Jupiter radiates 1.6 times as much energy as falls on it from the Sun. Thus, Jupiter has an internal heat source. It is thought that much of this heat is residual heat left over from the original collapse of the primordial nebula to form the Solar System, but some may come from slow contraction (liquids are highly incompressible, so Jupiter cannot be contracting very much.) This internal heat source is presumably responsible for driving the complex weather pattern in its atmosphere, unlike the Earth where the primary heat source driving the weather is the Sun.

### A Large Planet or a Failed Star?

Calculations suggest that Jupiter lacks the mass to initiate hydrogen fusion reactions in its core and become a star by about a factor of 100. Since factors of 100 are not so large on astrophysical mass scales, it is legitimate at some level to view Jupiter as either a very large planet, or a failed star. So, if you'd like to swing on a star, visit us.

## We Feature Helpful Non-negotiable Contract Language to Make Your Negotiations Simple

**Our motto is, "No, really the contract doesn't mean THAT".**

*Here's some sample language for your convenience:*

"Should the Group fail to reserve the entire block as of the cutoff date, then the Group shall be notified, and given the option of reserving any unbooked rooms, with the charges to be placed on the Group master account.

If the Group does not exercise that option, then the hotel reserves the right to charge addition fees for space rental, and to adjust the room rate for all reservations in the Group block."

"The Group will be responsible for the first night charges for all no-shows. The charges will be placed on the Group master account."

"The Group will use only the in-house AV contracting firm for any technical needs. A price list will be supplied 90 days before the event so it will reflect current prices. Any charges will be placed on the Group master account."

"The Hotel reserves the right to decide where your functions require paid security and will be the sole supplier of security as deemed necessary. This charge will be added to the Group master account."

We welcome your business.

Our friendly sales staff is always here to help you.

- **We might do a corkage waiver, but we won't guarantee it.**
- **\$99/room rates, single-quad**
- **\$7000 convention space rental, non-negotiable on room nights, although hotel function space is free**

Our Famous Swamp Pool located in the function space lobby. When you need the smell of chlorine, fluorine, and rotting vegetable material in the morning, **come here**. Drinks served by the swamp for your enjoyment.
